Discussions
Check Tutorial tab to know how to to solve.
Here is a sample line of code that can be executed in Python:
print("Hello, World!")
You can just as easily store a string as a variable and then print it to stdout:
my_string = "Hello, World!"
print(my_string)
The above code will print Hello, World! on your screen. Try it yourself in the editor below!
Input Format
You do not need to read any input in this challenge.
Output Format
Print Hello, World! to stdout.
Sample Output 0
Hello, World!
Line: 2 Col: 20
Upload Code as File
Test against custom input
Run Code
Submit Code
You have earned 5.00 points!
You are now 30 points away from the 1st star for your python badge.
